Storycast: Research and planning

1. Introduction

Storycast is a microsite in 3 pages that provides audio and video stories in a way that is accessible to everyone. All videos are captioned and all stories have a text version, so that people who are deaf, blind or have slow connections don't miss anything. This document includes the sitemap, the wireframes and high fidelity mockups that were used to design the site prior to constructions.

2. Information architecture

2.1 Sitemap

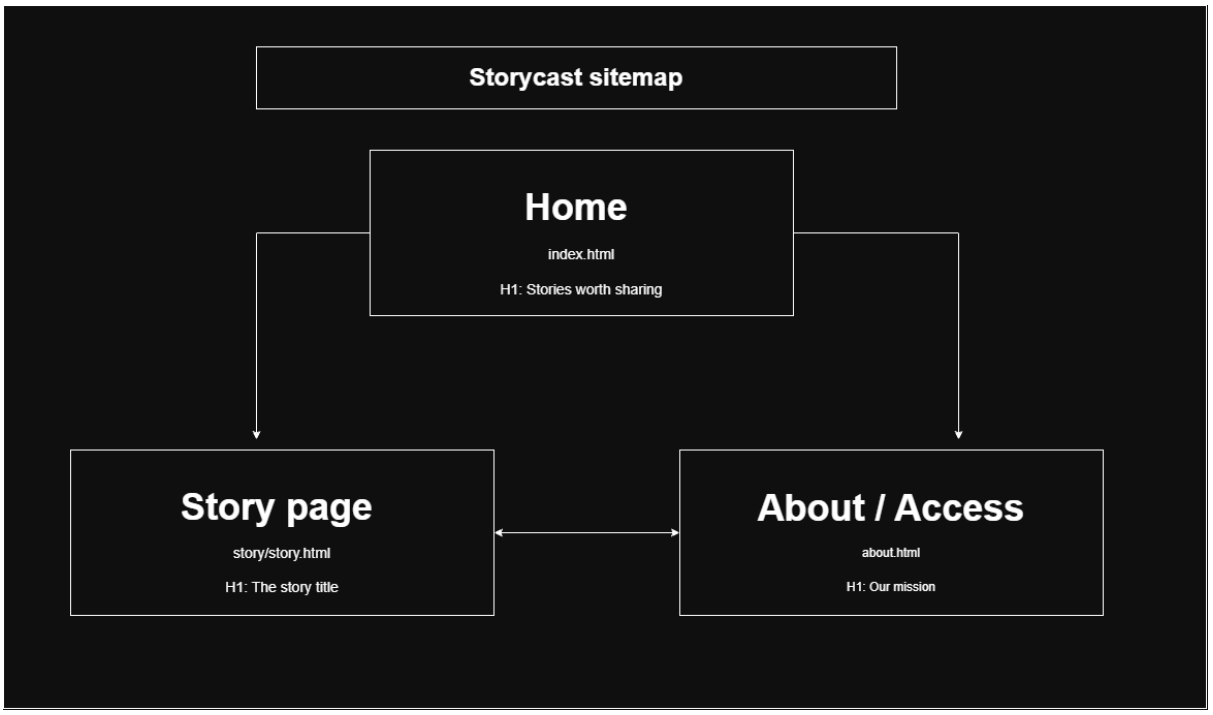

Figure 1: Sitemap

All pages are linked through shared navigation. Featured and related stories connect story pages and about / access clarifies the mission and accessibility.

2.2 Page hierarchy

Page	File	h1	h2	h3
Home	index.html	Stories worth sharing	Featured stories	Story titles

Story	story/story.html	Story title	About this story, Transcript, Related stories	Related story titles
About / Access	about.html	Our mission	Accessibility Commitment, Get Involved	Featured names, share your story, contact us

3. Wireframes

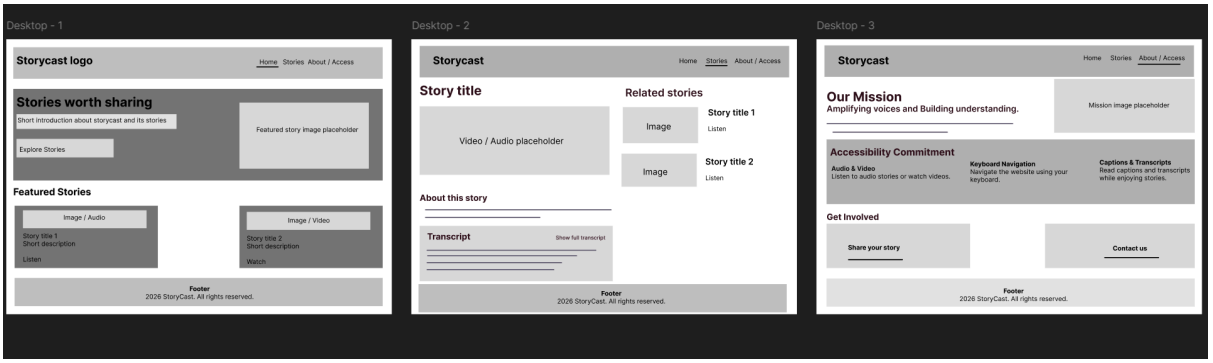

Figure 2: wireframes

Figma link:

Plain gray boxes are used in the wireframes to determine where things go before choosing colors or pictures.

4. High fidelity mockups

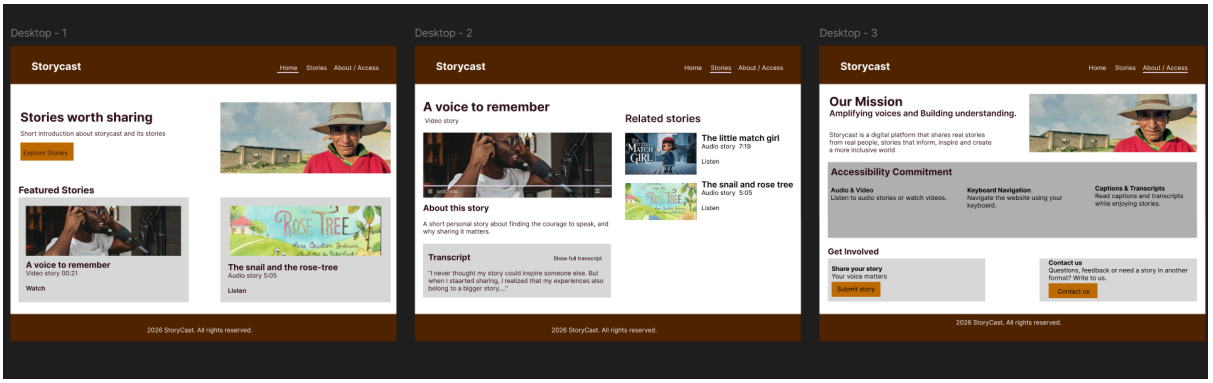

Figure 3: high fidelity mockups

Figma link:

The mockups add colors, typography and images to the wireframe layouts. The website follows and looks like these designs.
